

Ecologically enhancing sheetpile walls

A pilot project for the port of Hamburg

Sheet pile walls cover many kilometres of the port of Hamburg. These areas can hardly be inhabited by animals and plants and are not available for the biotope network - even though the Elbe and the port are the most important connectivity route for aquatic life in the Hamburg metropolitan region.

Goals:

- ✓ Enhancement of sheet pile walls at four locations in the port of Hamburg
- ✓ Monitoring over 3 years

Costs: € 150.000

Implementation: 2024
